

Experience

Contract Web Developer — Various Clients — Various Clients

January 2026 – Present

- Improved responsive WordPress websites for multiple clients by resolving layout inconsistencies, overlapping elements, and broken UI behavior across desktop, tablet, and mobile devices.
- Enhanced **scratchhq.au** through frontend refinements, CRM-related feature integration, and a custom plugin for inserting schema markup without relying on paid SEO plugin upgrades.
- Contributed to **getnifty.xyz** by improving scroll-based video animation smoothness, refining blog and page UI, and strengthening overall visual flow and user interaction on a Hygraph-integrated website.
- Built **isupplyseo.com.au** from scratch, leading the website's design and implementation based on client requirements, service content, and branding direction.
- Developed custom WordPress plugins for a multi-step onboarding form, blog filtering, and Kadence block extensions, while also handling technical site operations such as DNS, SSL, redirects, hosting setup, and deployment troubleshooting.

Web Development Intern – Bayoah PH

September 2024 – November 2024

- Completed assigned development tasks through GitHub-based team workflows, independently implementing fixes and opening pull requests for review in a collaborative web development environment.
- Resolved frontend and data display issues in React and TypeScript, including bugs related to filtering behavior, stale or improperly refreshed data, and incorrect table output.
- Implemented CRUD functionality and built a billing table interface for application modules, improving data management and internal usability.
- Contributed to backend and data-layer updates by adding schema support for new models, updating model field types, and assisting with PostgreSQL-backed application changes.
- Extended validation functionality by creating a custom Zod-based decimal validator to support application requirements not covered by the default library.

Freelance Web Developer

2021 – 2023

- Designed and developed responsive websites and web applications for individual clients and small businesses, managing the full workflow from client consultation and planning to implementation and deployment.
- Built user interfaces primarily with React, TypeScript, and JavaScript, choosing appropriate tools and architectures based on business needs and project budget.
- Delivered practical and low-cost web solutions using Firebase for authentication, database, and backend functionality, helping clients get started without heavy infrastructure costs.
- Gathered client requirements, translated them into working features, resolved bugs, and continuously refined projects based on feedback and evolving business needs.

Education

University of the Philippines Cebu

Lahug, Cebu City, Philippines

Bachelor of Science, Computer Science. GPA: 1.36 (3.65/4.0)

Expected June 2027

University Scholar (2023–2024, 2nd sem; 2024–2025, 1st & 2nd sem)

College Scholar (2023–2024, 1st sem)

DOST-SEI Scholar

Projects & Competitions

- **Philippine Startup Challenge (PSC) X – Central Visayas (Top 25 Finalist)**: Contributed to **Panday**, a web platform connecting clients with informal service workers, by helping shape the platform's design and improving user flow for users with limited technical experience.
- **IBPAP Hackathon (Can You HackIT?)**: Helped develop **PAEngke**, a React Native app for small vendors, by implementing interface designs from Figma and contributing to cross-platform frontend development under hackathon time constraints.
- **School Announcement Website**: Contributed to frontend development and led much of the backend implementation for a dynamic announcement platform built as a coursework project.

Skills & Interests

Frontend & Mobile: HTML, CSS, JavaScript, TypeScript, React, React Native, Tailwind CSS

Backend & Data: Firebase, PostgreSQL, Zod, tRPC

Tools & Platforms: WordPress, Git/GitHub, API Integration, Hygraph
